

Satellite radio is a new and innovative medium. Satellite radio fills a void that most radio stations refuse to address or support. XM Instant Traffic & Weather provides a very valuable service which should not be prohibited. In our rural area it provides a very valuable supplement to the limited selections in addition to the very limited range of the terrestrial stations. XM allows us the freedom to explore a vast variety of selections and get weather updates which are just not available in our area. The service they provide has proven invaluable.
